About me

Self-taught mobile developer with experience in Unity (C#), Django REST APIs, Android (Android Studio), Swift, and Flutter — focused on building performant, cross-platform apps.

Experience

Flutter dev @ Prolab

Sep 2023 – Present

My journey into the world of Flutter development began here. By creating projects and experiencing failures, I learned a lot.

Android dev teacher @ Geeks

Jul 2021 – Aug 2023

After COVID-19, I became an Android teacher in my city, at that time, there was no company I could work for, and I was a junior developer, which prevented me from working online.

Android dev @ Next Innovation Studio

Dec 2019 – Mar 2020

After completing the Android course, I worked at Next Innovation studio as the sole application developer. At that time, I was able to create applications on my own.
